lbina Sabater.

The interactive presentation given by Daena Giardella, professor at the MIT Sloan, who taught the workshop “Improvisational Leadership,” marked the beginning of a series of workshops offered by the “Clase Ejecutiva.” These workshops will be held on a monthly basis and they are part of the program Diplomados de Ingenieria Industrial UC. In this event, open to the general public prior to registration, attendees were able to develop new leadership skills through engaging activities.

The “Clase Ejecutiva” is an alliance between the Pontificia Universidad Católica de Chile, through its Department of Industrial Engineering, and the newspaper “El Mercurio.” This alliance was established in 1998 to promote the improvement of professionals in Chile. Twenty one diplomas (continuing education courses specializing in a wide range of topics, that last six months to one year of partial dedication) are currently offered and parts of their contents are published in Section B of the newspaper “El Mercurio” on Tuesdays, Wednesdays, and Saturdays.
